ignite change.

john w. gardner center for youth and their communities stanford university
"Informed Americans have finally awakened to the importance of youth development broadly conceived. If you want to train leaders, you have to start early. … We have to conduct research, educate a wider public, and mobilize citizen allies. We have to persuade diverse groups to work together — schools, social agencies, the faith community, law enforcement, all levels of government.

As the movement proceeds nationally, the Gardner Center is prepared to work with other universities and youth development centers across the nation to ensure broad participation.”

— John Gardner
AT JGC, WE BELIEVE RESEARCH IS THE IMPETUS FOR ACTION. If we focus on issues raised by real people in real communities, we know we’re addressing actual rather than theoretical challenges. Then, research findings translate into actionable opportunities, and that means communities can put those findings to work — in policy and practice.

Closing the gap between research and practice

The Youth Data Archive (YDA) is a comprehensive, one-of-a-kind research initiative that links data across schools, public agencies, and community-based organizations. Communities raise questions: What are the early-warning signals for a student about to go off-track academically? How can we “up the odds” for education success among young people placed in custody of the courts? How does the decline in recess and playtime in American schools affect young people? Using the YDA, communities get answers and assistance in making tough decisions about the best places to invest time and resources.

Bridge to Success (BtS) is a collaboration among educators from San Francisco Unified School District (SFUSD) and City College of San Francisco (CCSF), city government, and youth advocates created to improve post-secondary success for underrepresented youth. While most jobs in San Francisco require some post-secondary education, only about 1 in 5 SFUSD ninth-graders earn a college degree by age 23.

As BtS data partner, JGC helped answer a key question: As young people move from high school to college, which factors enhance or impede student success? Using the Youth Data Archive, the Gardner Center linked SFUSD data to CCSF data for the first time. Analysis yielded rich insights about transitions. For example, the YDA analysis revealed that many SFUSD students were not taking English and math courses in their first year at CCSF. These students had significantly lower transfer and degree completion rates after five years in contrast to students enrolled in these classes their first semesters. BtS uncovered it was a CCSF policy that assigned entering SFUSD student lowest priority in class selection that kept them from enrolling in these classes. Result? Classes were filled by the time registration was open to them. CCSF’s chancellor used the YDA analysis to change the class registration policy, ensuring that all SFUSD students enrolled at CCSF would be eligible to take English and math courses their first year.

That’s how JGC works, following John Gardner’s model for communities that flourish when “…continuous innovation, renewal and rebirth can occur.” Progress happens not in silos, but through respectful, reciprocal collaborations. Ask the right questions, gather the right data, and the answers can lead to positive change.

“Students have to know that at the end, their prize is to compete for the very best jobs this world has to offer.”

— Ed Lee, Mayor, San Francisco, May 2011, Conference on Bill & Melinda Gates Foundation’s Communities Learning in Partnership initiative
IMAGINE THIS: INVOLVE YOUNG PEOPLE IN PLANNING AND LEADING CHANGE IN THEIR COMMUNITIES. In a tangible example of Gardner’s counsel (“If you want to train leaders, start early”), JGC supports and guides young people as they learn a wide variety of important research methods. They put those new skills to immediate use — identifying needs in the community, analyzing their findings, and developing plans for advocacy and action.

**YELL (Youth Engaged in Leadership and Learning)** was JGC’s first program. It began as a curriculum developed to give Redwood City and Oakland middle-school students an opportunity to shape not just their own experiences, but the experiences of their communities. By cultivating skills in research and analysis, by challenging students to identify and address needs, JGC helped launch more than 350 young people into action — from founding and leading nonprofit advocacy groups to tutoring and mentoring younger students. Today, the YELL approach is embedded in many JGC projects and is used to support youth leadership and action in a variety of contexts nationally and internationally. The curriculum is available online, free of charge, to any community that wants to develop youth leadership through research and analysis.

Youth learn how to collaborate with adults, and they earn a place at the decision-making table. By developing policies and strategies with school leaders, city advisory board members, and leaders of community organizations, young people are involved in real challenges and create real solutions. For many, it’s a transformative first step to learning what leadership is all about.

"Through YELL, I learned real skills in research and analysis and gained confidence in myself. YELL changed my life." — Amalia, YELL alumna and college student

Resource Mapping is a research tool that can be used to inventory out-of-school time programming for young people in a particular geographic area. In just one example of this tool’s impact, in 2009, community leaders in East Palo Alto and the Belle Haven neighborhood of Menlo Park came together to solve a mystery: In an area where young people faced multiple risks and had access to many out-of-school time programs and opportunities, why weren’t more youth taking advantage of those programs? Using a JGC-designed Resource Mapping tool, the communities tackled three key questions: Where were there gaps or duplications among existing programs? How did existing services intersect with the interests of young people? What factors inhibit or promote participation?

Community youth were trained to survey peers about interests. By the end of the process, the communities had a clear picture of what was going on, including gaps in what was available: nothing to do after 6 p.m. and on Saturdays, and nothing sports-related for girls. Issues including access to locations and transit, and specific inhibitors, including crime “hot spots” in the community, also came to light. Solutions became clearer — addressing barriers, publicizing programs in new ways, providing opportunities for multiple age groups in one location, and working across agencies to fill gaps.
THE FIELD OF YOUTH DEVELOPMENT IS GROWING. That’s the good news that guides JGC to share promising practices with communities, scholars, and policymakers committed to youth development around the country. JGC collaborations result in new and creative project and initiative designs and research methods. We learn something from every project — insights, new models, next frontiers. We learn from successes and setbacks, and we share virtually everything — research results, tools, publications, and successful strategies for collaboration — with community groups and leaders who make policy decisions on the ground in communities throughout the country.

Learning From Each Other
At JGC, we believe in the power of partnerships. That’s why we share what we learn with policy leaders, decision-makers, thought leaders, in-the-field innovators, and researchers working in youth development. We bring our expertise in data systems and capacity building to policy conversations at the local, state, and national levels. And we contribute to building the field of youth development by sharing findings via scholarly journals and professional conferences.

Supporting Practitioners
We’re committed to the work of practitioners in the field, so we provide resources and tools for school and community leaders to use in fostering youth participation. Visit jgc.stanford.edu to find the YELL curriculum as well as the Youth in the Middle guide for pursuing a whole-school youth development approach at the middle school level. On the JGC website you will also find the Community Schools Evaluation Toolkit, a practical, hands-on guide for developing measurements to identify and evaluate tangible results at your community school site.

“...The Gardner Center takes the best qualities of a think tank and turns them into tools for use in and by the community.”

— Patricia Brown, Director, Redwood City 2020
"The Responsibles exist in every segment of the community...but they rarely form a network of responsibility for the community because often they don't know one another across segments. They must find each other, learn to communicate and find common ground." And as Gardner wisely points out, it's never too early to start taking responsibility. That's why JGC's work focuses on collaboration, sharing resources, building partnerships. That's why our work engages not just the people who care about youth development, but young people themselves.

Communities flourish when we all participate — universities, youth, community and civic leaders, policy makers, schools, social service agencies, and researchers. To learn more about how creating knowledge truly can ignite change to improve the lives of youth, visit jgc.stanford.edu or call (650) 723-3099.
