

Introduction

This dataset was created to describe patterns and trends among higher education institutions in the San Francisco Bay Area. The panel uses data from two primary sources, the Higher Education General Information Survey (HEGIS) and the Integrated Postsecondary Education System (IPEDS). Both sources are national surveys of U.S. colleges and universities fielded by the National Center for Education Statistics (NCES). HEGIS predated IPEDS and was conducted from 1965-66 to 1986-87. IPEDS replaced HEGIS and is still operating today. While HEGIS and IPEDS are the most comprehensive data sources on U.S. institutions of higher education, they are limited in scope since they may omit broad access colleges that do not grant degrees, are unaccredited, or do not participate in federal student financial aid programs under Title IV.¹

Universe

The data in the panel span seven counties in the San Francisco Bay Area: Alameda, Contra Costa, Marin, San Mateo, San Francisco, Santa Clara, and Santa Cruz. Information is available from 1968-2012, although certain variables may be unavailable in particular years. Some survey components are administered every other year. Additionally, many of the files from HEGIS were lost because of repeated format conversions. Although we did our best to gather information from multiple sources, there are no doubt holes in the panel.²

NCES collects information from colleges and universities in the fall, winter, and spring. For example, enrollment statistics for 2012 correspond to the 2012-13 school year while completion statistics refer to 2011-12. Although researchers may be tempted to merge files by academic year, we proceeded with a calendar year merge, as recommended by NCES, since the fall, winter, and spring surveys sample the same institutions in a given calendar year.

Variables

A codebook listing each variable is provided in a separate document. Variables that report financial statistics (e.g., tuition and fees, revenues, expenditures) are adjusted for inflation at the state level and presented in California dollars 2013-14.

Advice

For researchers interested in using these data, we recommend reading our memorandum on data limitations. The HEGIS and IPEDS universes change over time, which may have implications for data analyses. Although the panel is limited to institutions participating in Title IV, we have included non-degree-granting institutions. For many years, there are little to no non-degree-granting institutions, so long-term trend analyses should exclude these schools.

Additionally, researchers using these data should know that the yearly sample is small and varies from 59-107. The sample changes year-to-year and some colleges and universities may not report certain data annually. Long-term trend analyses may wish to consider methods like moving averages or imputation to smooth the data. Data from 1968-69 are included exclusively for this purpose since we could not locate the institutional characteristics files for these two years.

¹ Please refer to our memorandum, "Limitations of National Data on Higher Education Institutions," for additional information.

² Although IPEDS data may be downloaded from the NCES website, HEGIS files are not maintained by the federal government in a systematic way. A few HEGIS years are available on the IPEDS website, but most were obtained through the Inter-University Consortium for Political and Social Research (ICPSR) at the University of Michigan, a staff member at NCES, and a faculty member at the University of Arizona. See our memorandum, "Limitations of National Data on Higher Education Institutions," for details.
